

Why MPO connector? (1)

Reasons in the feature of infrastructure environment

- 1) The needs of the growing information transmission
- 2) Processing in the router is no longer keep up, then traffic would be stuck.

- 3) In the communication line, there is a transmission wavelength band shortage of relay amplifiers and optical fiber due to the number of wavelengths increase.
- 4) A problem that the entire network equipment scale and power consumption becomes enormous.
