

Fiber-to-the-Antenna (FTTA) Hybrid BLC® Cables

The Megalodon Difference

Our Fiber-to-the-Antenna (FTTA) Hybrid Cables are designed to support the most growth, signal, bandwidth and connectivity of all data systems. The cables designed by Megalodon can support any variety of rugged weather applications and are specifically designed to support any outdoor growth. The hybrid cable system design, reliable service and performance of performance.

The cables are made of high quality materials, designed for protection (proper) and connectivity. While rugged, Megalodon cables are also designed to be the cable of choice for contractors, and also for commercial and industrial applications. Megalodon cables provide rugged, performance and durability.
