

Fiber Optic Attenuators

The Megalodon Difference

Megalodon Fiber Optic Attenuators are used in a variety of applications where a specified amount of attenuation is required. Better performance is achieved by controlling the signal power through the modulation of attenuation. Megalodon-based attenuators provide highly accurate attenuation values that increase the system performance.

The attenuator method ensures wavelength independence and maximum accuracy, both critical for fiber-optical applications.

NEW PRODUCTS

- Megalodon 200-A Fiber Optic (200) cables available
- New 100-A method for 100dB
- New 100-A method for 100dB
- New 100-A method for 100dB
- New 100-A method for 100dB
- New 100-A method for 100dB
- New 100-A method for 100dB

APPLICATIONS

- Fiber Optic (Fiber Optic Network)
- Fiber Optic (Fiber Optic)
- Fiber Optic (Fiber Optic)
- Fiber Optic (Fiber Optic)
