

The Megladon Difference Hegladon Network Simulators are designed

Megladon Network Simulators are designed to support the needs of labs testing fiber-based systems prior to deployment. With customizable lengths up to 200km in a 68U footprint, our network simulators provide a stable

testing platform that enuitate a variety of fiber field applications, fletably, network simulations can be built with any connection, glass type and length configuration, and are designed to be rack mounted.

For more information on Megladon's ILC process and products, please visit megladonmfg.com.

KEY BENEFITS

- Castomisable longifes up to 20thm. In a GHz Exception.
 - . Nath Tricing Return that makes
 - a variety of fiber field application - Utilizes any common glass type - Tellizes demand law orderings on
 - can be built in for vimulation purpos • REP commuting at buildwad

APPLICATIONS

- * CEDA Transino
- * Equipment Itals
